

HP-UX 11i v3 IS HERE

Step up to a new level of virtualisation and automation

HP-UX 11i v3 is here – it's a leap forward in virtualisation and simplified management and it's something you need to know about. Make sure you avoid all of the pitfalls in UNIX deployment and can make the jump to an optimal HP-UX environment.

HP-UX 11i v3:

- Makes mission critical virtualisation real – providing powerful virtual-workflow flexibility at an aggressive new price point
- Leverages HP's enterprise class UNIX knowledge for use in entry-level systems including the new rx2660 system and HP Integrity BladeSystem BL860c
- Extends the capability of HP Virtual Server Environment (VSE) via dynamic memory migration and HP Virtual Partitions
- Delivers a 20-35% software-upgrade performance boost and up to 50% reduction in total cost-of-ownership
- Provides a dynamic roadmap for UNIX on the HP Integrity platform, protecting technology and development investments

Are your HP 9000 systems nearing end of support?

Are you concerned about spiralling maintenance costs?

Does running your mission critical applications on old-generation technology worry you?

Is IT hindering business agility?

If the answer to any of these questions is yes contact us to arrange a free evaluation of your current HP 9000 environment and let us demonstrate the "art of the possible" and show you how you can:

- Reduce your carbon footprint
- Invest your current maintenance budget on new, state of the art, highly efficient and flexible infrastructure
- Potentially reduce software license and support costs
- Embrace virtualisation to improve IT's ability to rapidly react to changing business conditions

If you would like to know more about this latest version of HP-UX and the new entry-level systems that complement it please contact Nike Consultants on 0871 200 3730.
